

SELECTION

VIAPLANT 2025

Our innovative design solutions bring the beauty and diversity of nature closer creating unique values in living spaces.

NATURE STORY MATERIAL

ABOUT VIAPLANT

The Viaplant brand was founded by Lépték-Terv, a landscape architecture studio in Hungary. It started as a form of artistic expression of the landscaping experience, working with plants for over two decades. As a result of in-house research and development, Viaplant manufactures creative, plant-based materials with various solutions combining nature and science.

Biofilic Design

The materials are produced for the architecture and design industry, with unique aesthetics values determined by real plant components. Once they are illuminated, they offer a completely new experience that can resonate with any home, hotel or office, whether residential or commercial indoor space. The coverings and objects can bring the atmosphere of nature into our interiors creating a relationship between landscape and people in the built environment.

/// Storytelling concept

The Viaplant brand is fundamentally defined by its philosophy, the storytelling concept. The duality of form and function is complemented by a story that stems from the place of origin of the plants and the associated memories.

Plants from various locations tell us many things. They connect generations through the historical past and also effectively reflect on the present. They draw attention to the value of the green spaces around us, the importance of the relationship between man and nature, the importance of human relationships and our precious moments.

The FLONDER lamp combines simplicity in form with a connection to nature.

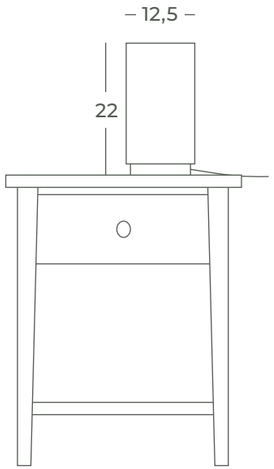

With its sleek cylindrical shape and unique plant patterns, its light transcends mere functionality. Whether as a table lamp or a ceiling fixture, every element of the Flonder lamp reflects attention to detail and timeless elegance.

This is just the beginning – the collection will soon expand with new pieces, bringing even more light and a nature-inspired experience into our homes.

The QUADRUM wall lamp transforms nature’s beauty into illuminated art, blending ambient light with organic elegance.

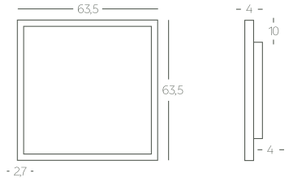

One of the features of Viaplant panels is the opaque transparency. Thanks to this, we can achieve spectacular results by illuminating the material. QUADRUM wall lamps treat nature’s performance as a true work of art.

The decorative, nature-evoking surface functions both as an emotional wall image and as a mood lighting in our interiors

The LIBRO lamp merges ambiance with versatility, offering both artistic illumination and functional lighting for any space.

Going beyond the static structure and the mood lighting function, the light source of Libro lamps can be ideally directed to the area to be illuminated. In addition to its decorative and atmospheric value, it can also be a reading lamp according to its function, and floor lamps can also illuminate larger interiors.

The COLUMNA collection blends pure design with organic textures, where Viaplant surfaces and ash wood bases create timeless elegance.

During the design of the COLUMNA lamps and furniture, our goal was to create a clean design as well as for the material to show its special textures.

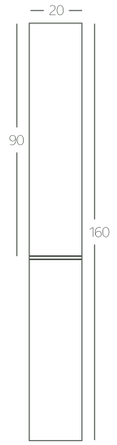

The bases of the furniture and table lamps are made of surface-treated ash wood, the shades are made of Viaplant composite.

plants and textures

The obvious character of Viaplant is the plant itself – its details, colour and texture record one moment in time of the plant’s development, whether it is a leaf, flower petal or plant stem.

Similarly, to amber that captures the history of life, Viaplant material encapsulates nature’s artistic performance and preserves it in the long run. The colours from seasonal variations, the real plant textures and the originating location, all add an emotional dimension to the Viaplant material.

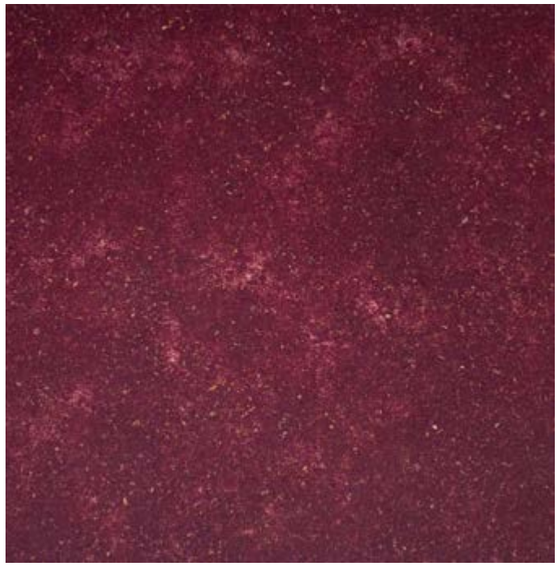

2025

Peonia | *Peony*

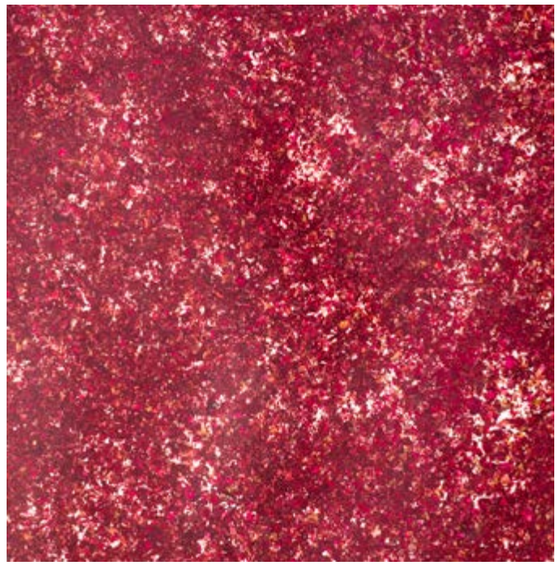

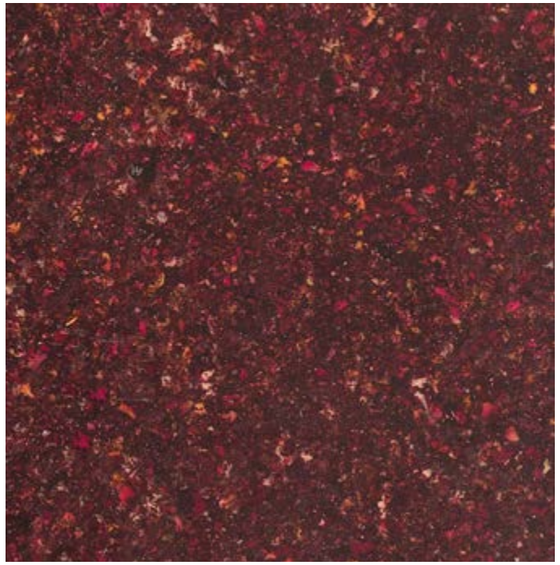

Rosa | *rose*

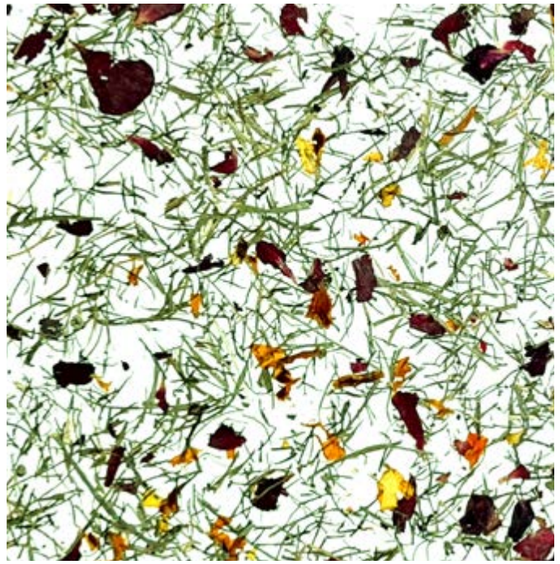

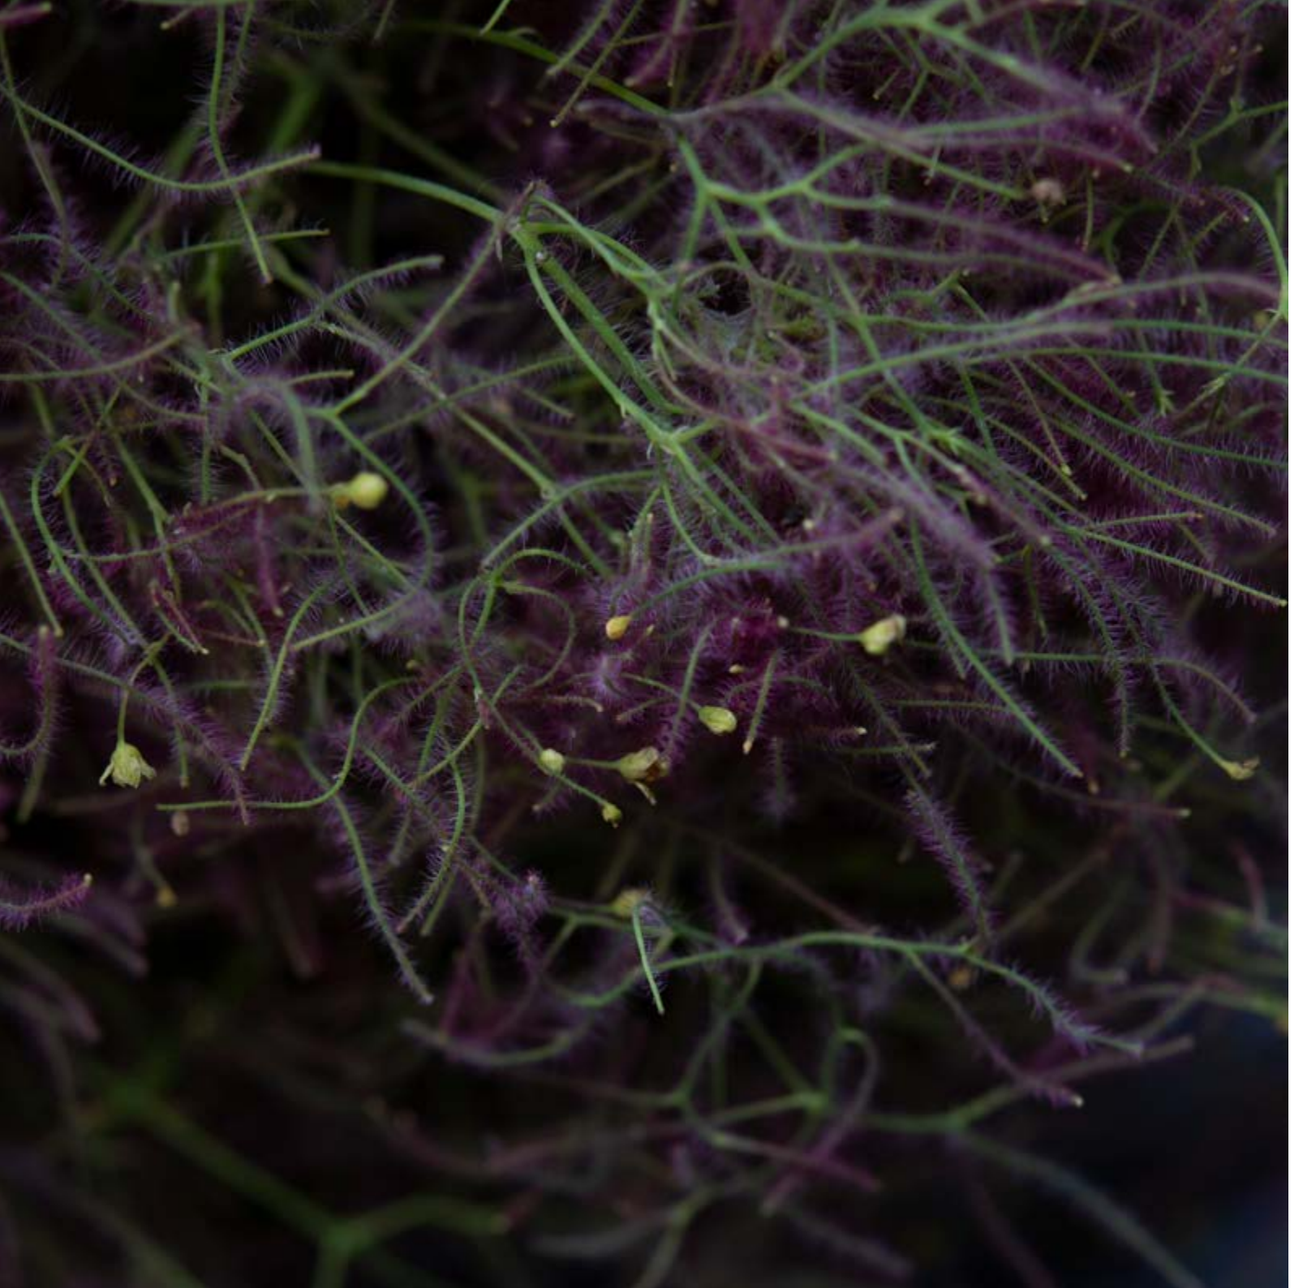

Poa Flori |

grass with flowers

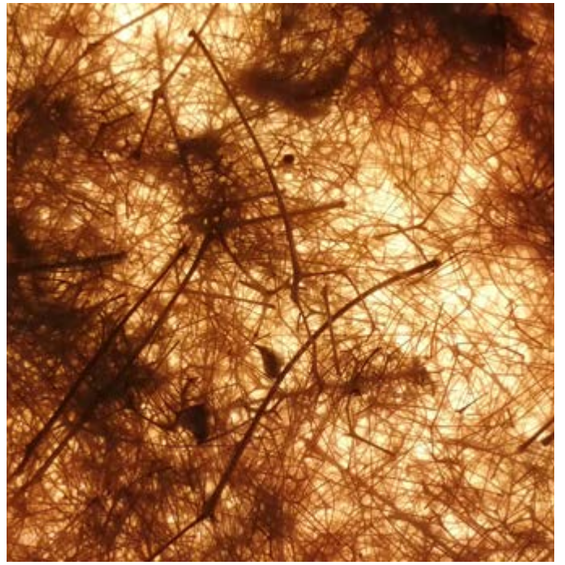

Cotinus | *Smoketree*

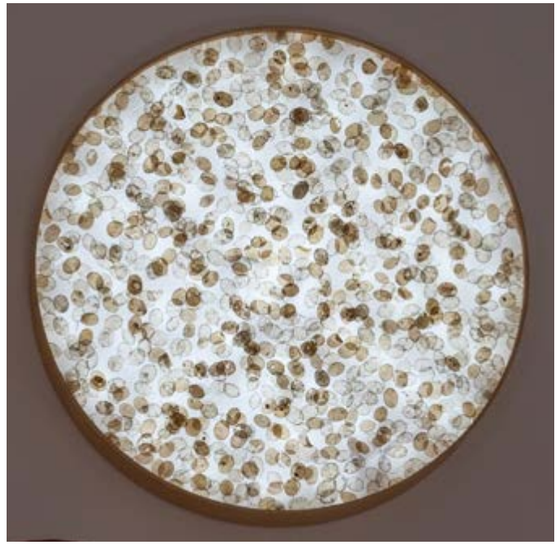

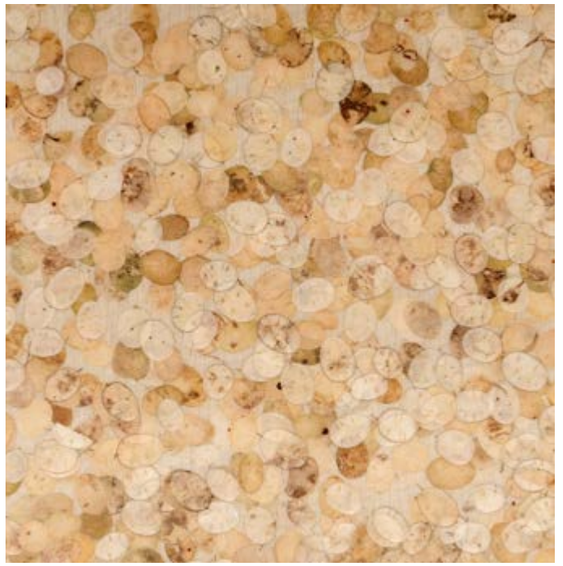

Lunaria | *Annua honesty*

"The delicate beauty of the honesty plant's translucent seed pods exudes a fragile elegance. The dry, silvery husks hang gracefully from the slender stem, resembling tiny works of art. This natural composition evokes both abstract artistic creations and fine craftsmanship.

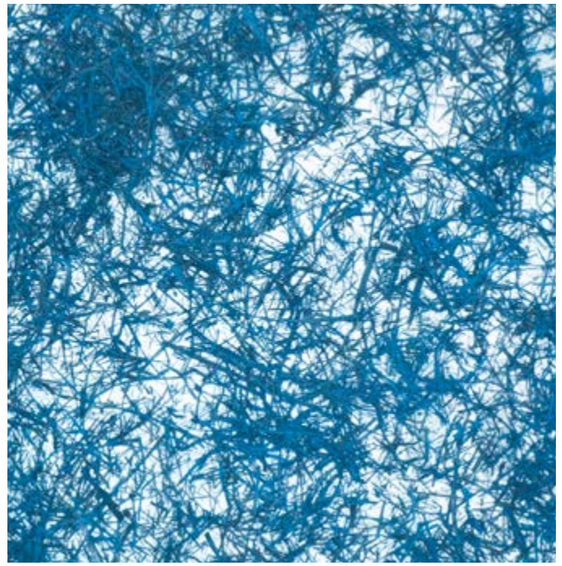

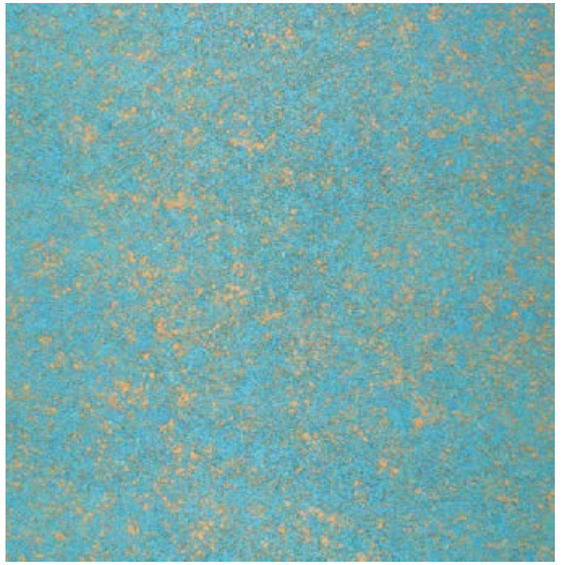

Lignum blue |

Tinted Woodwool

Lignum color combines woodwool with human imagination. The texture of the tinted woodwool creates a modern effect, and when illuminated, it gives an impressive atmosphere.

Phragmit | *Reed*

Calam-triticum |

Bushgrass - straw

“The quiet beauty of the feather grass meadow, shrouded in mist, radiates a delicate harmony. Amidst the golden stems of the dry inflorescences, the distant forest edge emerges mysteriously, providing a picturesque backdrop to the scene. The composition is both abstract and natural, reminiscent of the ‘pliage’ motifs in Simon Hantai’s paintings. The captivating pattern is perfectly expressed even on the small surface of a lamp, capturing the serene atmosphere of the summer meadow.”

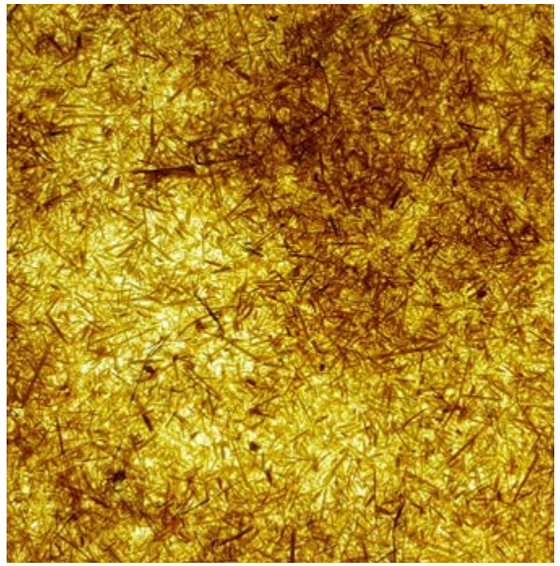

Triticum | *Wheat straw*

Flores mix | *Mixed petals*

Bespoke textures - Storytelling concept

A good object is defined by your understanding of what it means to you.

The Viaplant brand is fundamentally defined by its philosophy, the socalled story concept. The duality of form and function is complemented by a story that stems from the place of origin of the plants and the associated memories.

Viaplant imagines a future where people live in more natural spaces and relateto natural resources in a more conscious manner

Reconnecting with nature

Today, we have to look at an urban green space - like any other utilities - as a service provider. We must interpret it as a system that provides people an ecological service. Urban green areas are the basis of healthy urban life. They are habitats, community spaces, means of fresh air and serves as climate protection.

As landscape architects and material developers, our mission is to make people have a more conscious, living relationship with natural resources in our modern built enviroment. Our workshops, presentations and tenders aim to improve the problem of so-called 'plant blindness', which is a pervasive insensitivity to the green environment and a general neglect of the plants. Furthermore, following our philosophy, we like to draw attention not only to the urban importance of plants, but also to their cultural significance.

Sustainability

Examining our relationship with the Earth, we see that we depend directly and indirectly on the raw materials mined, grown or manufactured in it. For this reason, we must pay close attention to the environmental impact of our materials and the sustainability of pro-duction technologies.

We are constantly working on finding solutions that are as environmentally conscious as possible. We try to develop organic materials that have a positive effect on the world by large, being less polluting and using the sustainable processes of nature with their recycla-ble or even compostable properties.

We are present in material libraries to display and share authentic information regarding our research and material innovations, thus we are able to create cooperation in between the design industry and other sectors, as well as designers and manufacturers.
